Writing © Mometrix Media - FlashcardSecrets.com What are some common uses of the comma?	Commas may be used to separate the items in a sequence (three or more things). For example, "She went to the store, dropped off the clothes at the dry cleaners, and stopped by the post office." Use a comma along with a conjunction (and, but, for, nor, yet, or, so) to connect two independent clauses. For example, "She wanted to go to the store, but she did not have a car." Use a comma to set off introductory elements. For example, "Driving to the grocery store, she suddenly realized that she forgot her purse." Use a comma to set off parenthetical elements. For example, "The Statue of Liberty, which stands in New York Harbor, was a gift to the United States."

Two-Step Ratio Problems

A problem may not directly state both numbers that you need to set up a ratio. You may have to determine one of the numbers. Read the next example:

Example: On a test with 20 problems, Carla got 2 problems wrong. What was the ratio of the number of problems she got right to the total number of problems?

Step 1 Find the number of problems she got right. Subtract the number she got wrong, 2, from the total number of problems on the test, 20.

20 - 2 = 18

Step 2 Make a ratio of the number of problems she got right, 18, to the total number of problems, 20. Then reduce.

$\frac{\text{right}}{\text{total}} \quad \frac{18}{20} = \frac{9}{10}$
